

TONALI

The different products offered by Tonal have always been a benchmark in the high security market.

Tonal has been designing, manufacturing and installing integrated security systems for more than 50 years.

Its innovative designs include integrate metal detection, volumetric sensing, bullet-resistant glass and biometric identification.

All of these innovations are used to produce state-of-the-art high security systems.

In recent years, Tonal has focused its attention on finding integrated security solutions for:-

- employees control,
- building management, and
- territories control.

Thanks to the development of a new wide-band wireless communication system, Tonal can now provide security systems where the traditional cable wiring is not feasible.

Tonal believes that in order to provide the best protection, a careful examination of the customer required must be carried out.

Proposed systems must be user friendly, flexible and ready for the future.

That why Tonal's customer base includes regular clients in both Europe and around the world.

TonalSECURITY, offers anti robbery systems, vehicle and pedestrian access control products, presence detection, anti intrusion, smoke and gas detection, fire fighting, P.A., and video monitoring.

The TonalGMZ and GMZCAR allows integration of multiple technologies, i.e. Card readers and biometric systems into portals, gates and turnstiles.

When these products are used with Tonal's building management system TonalBAS, a comprehensive, integrated building management and security system is achieved.

Physical Access Control
