

SmartLane® access control

Willings Services Limited (WSL), Automatic Systems' installation partner, has recently supplied and installed 4 lanes of the new SmartLane® gates and 2 SL930 swing gates.

The gates along with additional glass partitioning, were positioned around the reception area in order to create a secure area, whilst at the same time providing staff and visitors with quick and easy access into the building.

- Installation of electrical supply.
- Site acceptance and commissioning test.

The installation was completed in one single uninterrupted program. Starting on a Friday night and completed on the Sunday afternoon, with the system in full working order for start of business on Monday morning.

The design brief was to create a secure workplace by limiting access into the building. While at the same time complying with the access control needs for the disabled and providing minimum inconvenience to both staff and visitors. As such a medium security, fast flow system was required.

As agents for a number of physical access control equipment manufacturers, WSL are able to offer a variety of products to best suit the clients needs.

After consultation with the client WSL decided that Automatic Systems SmartLane® gates best suited these needs.

The SmartLane® gates are state of the art optical gates which monitor the passage of every individual entering and leaving the building. With a fast-acting glass obstacle, physically deterring any unauthorised access.

Some key features of the SmartLane® gates are:-

- Slim housing;
- Modular design to offer a variety of security levels and operating modes;
- Wider lane options for wheelchair access;
- Intensive use;
- Designed for a high level of security, whilst maintaining a high level of safety;
- Elegant and discrete design;

- Quick, smooth and silent movement of glass obstacle;
- Over 20 years experience in manufacturing mass transit gates;
- Conforms to CE standards.
