

# Revenue Controlled Access Solution.

## WSL secures a repeat order from Parkin Estates, Woolacombe.

After the successful replacement of the parking control system at The Esplanade car park in early in 2008, Parkin Estates have now replaced the parking control system at their Sandy Burrows car park.

Sue Black, Managing Director of Parkin Estates said “the equipment and service has been wonderful. The reliability and stacking function has meant that even on our busiest days we have not had to raise the barriers and collect the money by hand”.

During the early phases of the design, WSL adopts a flexible approach. This allows the customer maximum opportunity to be involved, with the aim of ensuring the final product exactly fulfils the customers needs.

WSL believes that this philosophy, has helped to build a strong and

successful business relationship with Parkin Estates.

WSL’s coin handling expertise coupled with Automatic Systems vehicle barriers have been combined yet again to create another secure revenue controlled access solution.

Parkin Estates new system consists of two Automatic Systems high speed BL229 toll barriers and two bespoke “pay on exit” pay stations designed and manufactured by WSL.

The Automatic Systems BL229 toll barriers were chosen because of their fast operating speed 0.6 -1.7sec opening time and reliability, 20,000 operations per day.

At the heart of the pay stations lays WSL’s own parking machine controller or PMC for short.

To meet Parkin Estates initial requirements, several software modifications were required, these included: -

- Counting the number of tokens and printing on the audit ticket;
